

How to add the word "Dense" to the Dense Smoke Template File

(Per TTR #190 and VTEC Action Item #42)

Steps to add text to a template files:

1. On any lx workstation, open a terminal window as user **ifps**.
Execute the steps on the command line.
Type: `cd /awips/adapt/ifps/bin/linux` <Enter>
Type: `WWAAdmin.sh` <Enter>
The WWA Admin interface appears.
2. From the WWA Admin interface menu bar,
Select: **Edit**
Select: **Hazard Menu**
Double click on the product for the template that you want to customize, e.g. Dense Smoke Advisory.
3. In the hazard pop-up box, select the tab labeled **Miscellaneous Format**.
4. Above the **Edit** button is the name of the template file for the hazard.
Select the **Edit** button to load the indicated file into a text editor.
5. Modify the text. Specifically, add the word "DENSE" in front of the word "SMOKE".
6. Select: **Save**
7. Select: **Exit**
8. Select: **Yes**
9. When changes are made to existing template files or if a new hazard is established, a "-wwa" localization must be run on each workstation.
See next set of steps.

Steps to run WWA localization:

1. Open an xterm window on a Linux workstation.
2. Login or switch user to user fxa:
`su -l fxa`
<enter fxa password when prompted>
3. Run WWA localization by typing:
`/awips/fxa/data/localization/scripts/mainScript.csh -WWA CCC`
4. Exit fxa login session, and xterm window by typing:
`exit`
`exit`
5. Repeat steps 1 through 4 for every Linux workstation.
